September 2011 Newsletter

Arcadia, CA –September, 2011 - Master System, a leading developer of ERP business software solutions, is pleased to inform you some add-on features:

Sales Rep. Commission Rate by Inventory Class

Are you looking for ways to calculate sales commission based on class? Do you have items that would offer higher commissions? Would you like to setup commission rates by item categories? The OMS Development Team is always seeking for new enhancements to better suit your needs. A new calculation for commissions has been developed to breakdown the sales commission rate per item class, saving you time on recalculating item commissions per invoice. Setup is easy: an inventory class commission rate table is available to setup commission rate per sales representative. Now, you can easily assign commission rates by different item class that is defined in the inventory file. The new function is powerful and it increases the flexibility of the commission calculation to the next level. Contact an OMS representative for more information.

Wildcard Search

What if you were searching for an item, a customer or vendor, but you only had some of their information, like part of the item description, the last four digits of their phone number or part of their company name? We at Master System are always updating to meet our customer's expectations and one of them is a new search function. Now, you can search with partial information! This feature will search any text and match it with common fields like item description, customer name, vendor name, email, phone number, and much more. There's no need to know everything about a specific item number, customer name, vendor name, or leading part of the information. Contact an OMS Service Staff for more information.
