MASTER SYSTEM ANNOUNCES VERSION 3.0 ENTERPRISE WAREHOUSE MANAGEMENT SYSTEM

ARCADIA, CA JULY 8, 2008: Designing a Warehouse Management System requires a robust architecture built from the ground up to handle the scalability, security, communication, interface issues unique to distributed deployments. The OFFICE MASTER SYSTEM™ (OMS) Enterprise Warehouse System has been designed from the ground up to meet these challenges. Based upon years of experience in developing logistics, distribution, and supply chain management solutions, the Master System team has built an application framework and architecture centered around meeting these challenges.

OMS-WMS Overview

The OMS Enterprise Warehouse System (OMS-WMS) is not only best-of-breed, but singularly targeted for exactly your supply chain and inventory management needs, and expandable when you need it. OMS-WMS is a system designed to address the critical day-to-day "operational" issues of your warehouse. OMS-WMS gives companies on-line, "real time" insight into all warehouse operations and inventory availability. It facilitates communication and the open exchange of information between warehouses, employees, distributors, suppliers, manufacturers and customers.

The key to optimizing any warehouse operation today is to provide immediate access of warehouse data to everyone who needs it. Master System provides companies and their trading partners with immediate access to mission critical real-time information and enhances productivity across the supply chain. Master System's solutions were designed to facilitate global management of resources and information, to reduce costs, decrease the level of required on-hand inventory, and most importantly, increase revenues.

FEATURES INCLUDE

Automated Put Away, Pick Planning, Forward Picking, Replenishments, Quality Control, Cycle Count, Physical Count, Pallet Building, Pallet Tracking, Expiration Dates, Manufacture Dates, Shelf Life, Catch Weight, Carton Ids, Lot Management, Serial Number Maintenance, Kit Processing (kitting), Cross Docking, EDI, Warehouse Productivity Reporting and RFID.

INTEGRATED WITH OFFICE MASTER SYSTEM™ (OMS)

OMS customers will find the “plug and play” aspects of integration a one-step approach to having complete control over the performance of their warehouse personnel’s productivity. Multiple warehouse and multiple bin controls highlights the ability to drive picking and packing, put away and more into a work process tool designed to allow more picking than walking around looking for products. Integrated to OMS the 6-step approach to shipping improves accuracy while lowering the costs in the warehouse. The 4-step approach to put away keeps your inventory accurate and optimizes the put away.

PUBLIC WAREHOUSES AND LOGISTICS COMPANIES

Companies who provide public storage, or who retain inventory on consignment have special needs. Those needs primarily focus around the ability to discretely track, control, and process inventory for a selected customer – the "owner" of the inventory -- while maintaining inventory integrity across multiple owners. In the past, these companies had little choice other than to construct a creative patchwork of workarounds. OMS WMs is a true, 3rd party enabled system. This means that items, locations and inventory transactions can be linked to the owner(s) of the inventory.

Some of the key features Include:

- Owner Links To Item Codes (SKUs)
- Owner Links To Vendors
- Owner Links To Warehouses
- Owner Links To Zones
- Owner Links To Individual Locations
- Owner Specific Inventory Transactions
- Owner Specific Inquiries
- Owner Specific Order Processing
- Owner Links To Customers (Ship-To's)
- Owner Based Invoicing Reports

In a crowded field of software providers, Master System solutions stands out as one of only a small handful of companies that can deliver true supply chain solutions. The management of Master System has been developing and implementing supply chain, order and warehouse management systems for 20+ years and has been successful in delivering business systems worldwide, across multiple industries.

At Master System we provide a mix of software and professional services addresses all of your supply chain business needs. Our OMS products and timely services provide solutions to help customers transition to an automated and streamlined, interactive process. All of our OMS business software solutions are engineered in an architecture using real-time information a supply chain concentric environment.

So whether your company is ready for an enterprise-wide supply chain system or you are a smaller company looking for technology to help you manage inventory or compete for new business, Master System OFFICE MASTER SYSTEM™ solutions is the first name you should think of on the road to supply chain automation.
